

BuildableLabs - Wildcard Generalist Engineer

Time Limit: 48 hours

Assignment: Real-Time Live Event Broadcasting System

Build: A live streaming platform where creators broadcast video, viewers watch with chat, and n8n automation handles notifications.

Quick Version:

- **Phase 1 (Mobile + Backend):** Creator streams, viewers watch, chat syncs
- **Phase 2 (Offline):** Queue chat locally, sync when online
- **Phase 3 (Automation):** n8n notifies followers, detects trends, generates highlights

What You're Building

Creator (Mobile App):

- Start live stream
- See live viewer count
- Read viewer chat
- End stream

Viewer (Mobile App):

- Browse streams
- Join and watch video
- Send chat messages
- See viewer count

Automation (n8n):

- Stream starts → notify followers
- Viewer count > 100 → alert creator
- Stream ends → generate highlights
- Daily digest of top streams

Backend:

- **Real-time video + chat sync**
- **Concurrent viewer tracking**
- **Offline support (queue chat, sync when online)**

What to Build

Phase 1 (Streaming):

- Creator app: Start/end stream
- Viewer app: Join, watch video
- Real-time viewer count
- Basic chat (messages sync across viewers)

Phase 2 (Offline):

- Offline support: Queue chat locally
- Sync when online: Messages in correct order
- Conflict handling: Offline edits merged properly

Phase 3 (Automation):

- n8n workflows
- Stream starts → notify followers
- Viewer count milestones → alerts
- Stream ends → generate highlights
- Daily digest

Submit

1. GitHub repo (/mobile /backend /n8n-workflow)
2. Prompt sharing (chat link or doc)
3. n8n workflow export
4. App
